Nathan Mannes

Software Engineer

nmannes@gmail.com
347-346-2313
Washington, DC

OTHER

Kalshi Trading Bot

2026-02 – Current

Developing a slightly profitable automated trading strategy specific to a subset of Kalshi markets using Python, JS, AWS, ffmpeg, and a TV Antenna

Care for Real

2024-02 – 2024-08

Volunteered at a local food pantry ~5 hours a week for an educational program

Political Rhetoric Analysis

2018-10 – 2018-11

Analyzed transcripts for political rhetoric, finding with statistical significance that rallies held in swing states had a higher percentage of populist speech than those outside them

SKILLS

AWS, Bash, CSS, Databricks, Docker, Git, Go, HTML, JavaScript, Kotlin, NodeJS, NoSQL, Python, React, Ruby on Rails, SQL

EDUCATION

B.A. Computer Science, Carleton College

2015-09 – 2019-06

Coursework: Data Structures, Algorithms, Data Science, Linear Algebra, Software Design, Computability and Complexity, Natural Language Processing, Artificial Intelligence, Quantum Computing, Computer Graphics

Athletics: Finished 3rd at D-III College Ultimate Frisbee Nationals in 2018 and 2019

EMPLOYMENT

Capital One, Software Engineer

2024-09 – Present | Washington, DC

- Led implementation of CI pipeline module (Groovy) to instrument component and live-dependency tests for every Java/JS/Python application in non-production environments, requiring one line config change from application teams
- Measured the AI-generated share of code written across the company by building the Databricks-based Python data pipelines behind Flight Attendant, which tracks AI coding agent usage (Claude Code, Windsurf, Codex) for 13,000+ developers with privacy-preserving aggregation

Academia.edu, Software Engineer

2021-09 – 2023-05 | Chicago, IL (remote)

- Proposed and built Ruby on Rails (Sidekiq) ETL jobs ingesting metadata for millions of academic papers from open-access datasets, optimizing database load management
- Built and scaled a social-media MVP in React to increase user time-on-site
- Interviewed engineering candidates and ran technical screens
- Ran A/B tests across email marketing and site content, boosting cashflow

Sezzle Inc., Software Engineer

2019-09 – 2021-08 | Minneapolis, MN

- Designed the database schema and built the Go backend and frontend for Sezzle Spend, a checkout program that discounts customers' future orders
- Mentored a software engineering intern for two months
- Built payment nudges in the SezzleUp program to steer customers from Stripe to ACH
- Combined affiliate links with a Sezzle-issued credit card, letting customers pay with Sezzle at retailers it didn't yet partner with
- Wrote several React-based webpages that automated customer-service workflows, saving associates ~20 man-hours per week
